

Intro to Digital Media Assignment #1

Scanner Art!

Due: Monday, September 8th

WITH THIS ASSIGNMENT we will familiarize ourselves with flatbed scanners and gain a better understanding of image resolution through the wonders of “scanography.”

You will need a variety of two-dimensional or three-dimensional objects to scan that will fulfill your vision. Think about things like texture and detail, as scanners will pick these things up in a very interesting way.

Hopefully you will have had the opportunity to do some scanning on Wednesday, August 27, if not, you may have to come in to use the scanner outside of class, as the remainder of your work sessions should be dedicated to working on the assignment with Photoshop.

Pay close attention to the resolution at which you are scanning your materials. Be inventive and consider content and composition carefully. Three separate, yet related pieces (at least 8”x10” in size at 300ppi) are due in class on Monday, September 8th.
